

One Day Event: Machine Vision Concepts Cognex EasyBuilder Programming

COGNEX

In-Sight is Cognex's powerfully and fully integrated vision sensor software. The In-Sight/EasyBuilder® software allows you to connect, configure, emulate, operate, maintain, and expand all from an integrated user environment. With no programming needed, applications are deployed quickly. This includes automatic extraction of features, setting smart parameters and limits.

Spend time getting familiar with EasyBuilder.

Join Cognex at the FPE Automation training center in Elk Grove Village. The In-Sight® Explorer EasyBuilder® interface walks you through the process of setting up your vision application, step by step. Great for all users, regardless of previous experience.

One-day event offers hands-on training.

We will cover the difference between vision sensors and vision system and other solutions. We'll discuss general machine vision concepts, lighting, lenses, resolution and other factors you'll need to consider when engineering a vision system. We'll go over Cognex In-Sight EasyBuilder programming examples. Then, we'll finish off the day with a hands-on session with actual parts. Bring your own parts with you!

Who should attend?

Anyone who is responsible for production, quality, automation, maintenance, and system integration or engineering in a manufacturing environment, also interested in learning about machine vision will gain valuable information.

WHERE:

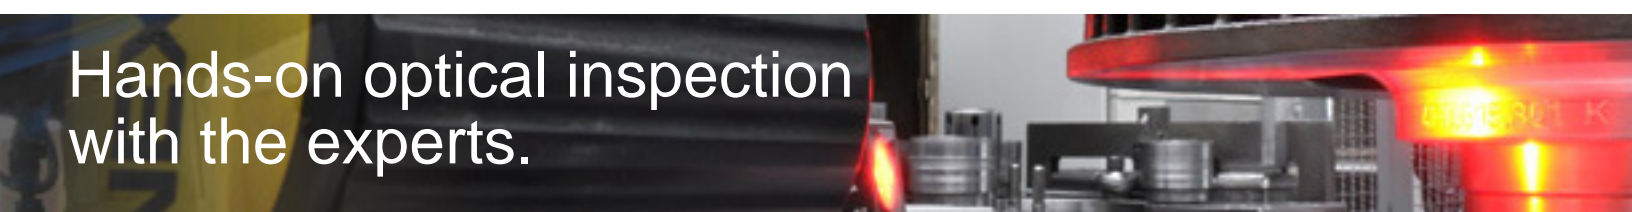

FPE Automation, Inc.
Training Center
110 Gordon Street
Elk Grove Village, IL 60007

Lunch provided at noon.

Prior registration required. Dates are subject to change. Please check our website for availability. Class space is limited.

Class requirements: Bring your own Windows-based laptop
